EDUCATION

Computer Science
Studied Computer Science at Menofia University, focusing on software development.

05/2021 - 01/2025   *Good 2.86/4*

WORK EXPERIENCE

Mentorship with Omar Ahmed
online

08/2024 - 10/2024
Achievements/Tasks
- OOP
- we read and analyzed several technical books including "Clean Code" and " Grokking Algorithm "
- We successfully delivered a fully functional Flutter app that demonstrated our understanding of clean architecture, state management, and responsive design.

Flutter Developer
intern / pure soft company

05/2025 - Present
Achievements/Tasks
- Contributed to the UI development of a Fruit E-commerce mobile app using Flutter.
- Completed responsive interface design for both landscape and portrait orientations.
- Ensured UI followed modern design principles and provided smooth user experience across different screen sizes.
- Collaborated with the team delivered tasks on time.

PERSONAL PROJECTS

DiveApp
- **user-friendly e-commerce app built with Flutter, designed for a smooth and interactive shopping experience. This app includes essential e-commerce functionalities, integrates Firebase for backend services, handles dark mode, payment processing, and more** ↗

Rahhala (04/2025)
- Rahhala is a community-driven travel app built with **Flutter** and **Supabase** . Users can sign in, share travel experiences, explore posts by city, and connect with a global travel community. ↗

SocialMediaApp(small)
- Developed a feature-rich social media application using **Flutter** and **Firebase** , implementing user authentication, post creation, and real-time updates. ↗

GetIt ↗
- **Habit Tracker App** – A Flutter-based mobile application designed to help users build and track daily habits efficiently. The app features a **heatmap visualization** , **local storage with Hive** , and **daily notifications** to keep users on track. With an intuitive UI, users can **mark habits as completed, archive old ones, and monitor progress** over time. ↗

TukRideApp
- **App Like uber but For tuk tuk** ↗

WeatherApp
- **provides real-time weather data for locations worldwide. With a beautiful and responsive design, it offers current weather conditions** ↗

ToDoApp
- cross-platform task management app designed to help users organize tasks effectively. The app is built using **Flutter** and employs Cubit for state management, with Hive Local DataBase.
